

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/739,326

made in a manner of connection by two wires and providing the appliance with two contacts.

Therefore, there have been problems of troublesome connecting operations and complicated design of the arrangement of the terminals on the instrument. There has been another problem that the demand of arranging positive and negative output terminals on the one end face of the battery cannot be realized because the diameter of the battery is small. This invention has been accomplished in order to solve these problems.

IN THE CLAIMS:

Please add the following new claim 10:

10. (New) The battery according to claim 1, wherein the positive terminal and the negative terminal are coaxially disposed on the single input-output terminal.
